Your Comments: It is past time that the Willamette River be decontaminated!

The proposed cleanup plan leaves much too much of the river contaminated for generations to come. More polluted sediment must be removed from the river.

Toxic sediment that is dredged from the river must be taken to an appropriate landfill location. The lower Willamette River needs to be cleaned up to the point that it is safe to eat the fish from the lower Willamette River. At present it is recommended that a healthy adult eat NO MORE THAN 8 ounces of fish per MONTH from this Superfund area! Those companies/corporations who added to the contamination of the river must be held accountable and must help pay for a comprehensive cleanup that will protect the health of our communities, our environment and wildlife and the cleanup should be completed within a 10-20 year time frame.
